SECTION 6**TEST PROCEDURE**

The wall assembly was instrumented with thermocouples (TCs) in accordance with Figures 6.1(a) and 6.1(b); Detail H, of NFPA 285-2012 test method. 18 GA, Type K TCs were used in the burn room and 24 GA, Type K were used on the exterior façade and combustible core space. The window burner was positioned in the center of the opening and 4 in. off the exterior face of the wall assembly. Testing was performed on 02/22/2019 in accordance with NFPA 285-2019 test method. Ambient conditions were 55°F and 80% relative humidity. Video recording, digital photographs, visual observations, and data collection were performed prior, during, and after testing was completed. Temperature data was recorded every 15 seconds. The test was initiated at 09:47 a.m. with the burners on for 30 minutes. All observations are recorded in the table located in Section 8.

The apparatus is considered to be under calibrated conditions when the time average temperatures and the time average heat flux readings obtained for a calibration wall match the requirements of Table 7.1.11 of NFPA 285-2019.
